

USING THE PROJECTOR IN THE PUBLIC MEETING ROOM

In order to access the projector mounted to the ceiling in the Public Meeting Room, your device (laptop, tablet, or phone) must be able to connect to one of the cabled connections in the audio-visual cabinet.

There are two cabled connections (both MALE) in the cabinet:

HDMI (carries both audio and video) -

VGA (carries video; cable has a stereo mini cable attached for audio) -

If your device has either an HDMI or VGA connector, you will be able to connect directly to the cabled connections in the cabinet. If your device has different output connectors (other than HDMI or VGA), you will need to research and purchase the proper adapter to bring in order to connect to one of the cabled connections in the cabinet.

*****IMPORTANT NOTE:** The library will not provide any adapters or cables for use in connecting to the projector.
